

Cookies

A cookie is a small file stored on your computer hard disk. It enables a website to remember a computer accessing this website. In addition, the cookie may contain information on computer user preferences during website visits. Further, cookies are used to track which individual websites a user visits in which order.

How do we use cookies?

Our website uses cookies in order to track how visitors move through the web pages. We use this information in order to keep improving our on-line offering: e.g. by analyzing which sections are particularly popular or where we must improve the navigation options.

Enabling and disabling cookies

For information on how to enable or disable cookies, please refer to the help section of your web browser. Most up-to-date browsers allow you to generally disable or enable cookies and to exempt cookies of reliable websites from this rule. The help section should also contain instructions on how to delete cookies that are already on your computer.
