

High Yield Value Bonds Short Duration 2018

FIXED INCOME

A quiet month in High Yield

Low volatility dominates the year

Markets December was a very uneventful month for high yield. The spread on short dated moved sideways with minor fluctuations in the range plus/minus tre basis points.

The big events in the markets were the FOMC interest rate meeting in the middle of the month and the upcoming U.S. tax reform. The Fed decided to increase the guiding rate by 25 basis points. Following the meeting, the Fed chair gave her final comments, before being succeeded, on the U.S. economy where she expressed her optimism on the U.S. economy. The new tax proposal and the Fed rate increase led U.S. rates to increase. The effect on high yield bond prices were however muted causing high yield bonds to outperform government bonds in the period that followed.

Overall 2017 was a good year for high yield. The asset class delivered a total return in local currency of 7.64 percent. The return was the result of all-time low volatility, a global shortage of opportunity to find yield, improving issuer balance sheets, and rising commodity prices made high yield spreads tighten 71 basis points, which in combination with coupons led to the strong annual return.

In total, the asset class had two months of negative total returns and the short dated segment had one month. This made 2017 the least volatile year of the last 20 for the asset

class. The volatility of the monthly returns was just one fourth of the last 20-year average.

A quiet month

The Portfolio The fund provided a positive return of 0.09 percent in December, which was quite strong compared to the broader markets. Investment Grade and High Yield markets ended the month respectively 0.52 and 0.23 percent higher. Year to date the fund reached 2.87 percent.

In December, no sector made a negative contribution to the fund return. The top performing sector was energy once again.

In terms of single issuers, the top performer was the previously mentioned oil company drilling for oil in Kurdistan. The bonds have gained due to continued payments from the local government and the following build-up of cash balances.

In December, one position was called and two matured. Additionally, we decided to rebalance one position and take profit on another. The proceeds were reinvested in seven existing names and two new names.

We are very careful to balance the risk budget of the portfolio with the short maturity, so are mainly targeting new investments with ratings of BB or better.

Return is calculated gross of fees and excluding swing.
